1. BACKGROUND

The Pebbles Project is a community project which spreads across Gong Gong and Barkley West in Dikgatlong Local Municipality. The project is an initiative between the Department of Economic Development and Tourism, Frances Baard District Municipality, Dikgatlong Local Municipality and the beneficiaries.

A primary cooperative was registered four years ago. This cooperative is made up of 10 members predominately from Gong-Gong and Barkly West. The project aims to formalise the trade of pebbles in the Dikgatlong area, increase the income and benefits of pebbles sales to local community and stop the exploitation of the informal pebbles traders.

The corporative members are members who have always trading on pebbles though very informally. The biggest challenge was how these traders were exploited by the bigger and more formal nurseries and etc.

In trying to formalise the cooperative and trading in pebbles in the Dikgatlong municipality, Government and the cooperative has identified the creation and operationalization of a depot for storing, processing and marketing of the pebbles as critical to the growth and development of the sector. As such a piece of land in Gong-Gong has been availed by Dikgatlong for purposes of developing a pebbles depot.

2. OBJECTIVES OF THIS REQUEST

The objective of this bid is to appoint a service provider to drill & construct borehole in Gong Gong in Dikgatlong Municipal Area

3. EXTENT OF THE WORK

The services requested require service provider to carry out the following tasks:

- Geophysical Survey
- Borehole Construction (Drilling, pump testing and equipping borehole)
- Close Out Stage

The services required in respect of each of the tasks are described below:

3.1 Geophysical Survey

Site selection – at the site clarification meeting the client will show bidders the site where borehole should be tested for water and installed in close proximity.

Geophysical/geological report – a technical feasible geophysical/geological report shall be compiled to determine whether it is feasible to drill for borehole and to install a pump

3.2 Borehole Construction

Basic methods of drilling are indicated below as a basic guide if Contractor/Service provider will be using different method it should be explained in bid document

Drilling Methods:

- The preferred method of drilling in consolidated compact formations is rotary percussion with air and/or foam flush. Boreholes will be drilled with 6½ inch (16.51cm) drill bits and reamed with a **minimum diameter of 8 inches (20.32cm)** for sanitary protection or for lowering temporary casings.
- In unconsolidated loose, unstable, collapsing formations, rotary with appropriate drilling stabilizer will be used. In such a case the drilling diameters will be telescopic starting with diameter large enough to lower temporary casing in upper collapsing formations and continue drilling with a **final minimum diameter of 6½inch (16.51cm) bit**. If other chemical fluids or solids are used to arrest collapsing of formations, the Contractor has to use proper borehole development and cleaning methods to make the use of borehole water is safe for drinking purposes. The Contractor will use such fluids or solids with the agreement of the Client.
- Boreholes will be constructed with UPVC casing, screen and sand trap. The Contractor will decide appropriate lengths of slotted screen in the aquifer intervals.

Borehole Depth:

- Boreholes shall be drilled to such depths as to penetrate below the shallow water table aquifers and tap the first potential deeper aquifer or aquifers in confined/semi-confined conditions with a minimum discharge of **0.25liters per second** to sustain continuous pump testing for 7 hours to ensure reliable operation of electric pumps fitted on them.
- The depth to be drilled should be at least 40 metres and at least **six (6) meters** below the main aquifer to provide proper installation of a hand pump and to provide a sand trap of 3 meters. If the discharge is less than 0.25liters/sec., a decision to abandon the borehole or continue to drill deeper will be at the discretion of the Contractor.

Borehole Diameter:

- Boreholes will be drilled with telescopic diameters.
- The first 6 meters from the surface will have concrete grouting for sanitary protection. For this the borehole will be reamed to a minimum diameter of 8 or 10 inches and concrete grouting placed in the annular space between the casing and open borehole wall.
- Borehole will be drilled with 6 1/2 inch bit. The reaming diameter will be based on the type of temporary casing the contractor will use and not less than 8 inches to install Class 10 PVC casing of 140mm outside diameter for the total depth of the borehole
- The contractor must take into account the depths he has to drill and lower temporary casing to complete the drilling. This cost must be built in the quoted unit cost for drilling.
- The client will not be responsible for any loss of temporary casing which the contractor is unable to pull out or lost due to snapping or breaking from the completed boreholes.

Screen:

- The Contractor will use proprietary; factory-made Class 10 UPVC slotted screens, the slot size and screen length depending on the aquifer materials and aquifer thickness. The Contractor will take sole responsibility of designing the well assembly and placing screen and casing at appropriate depths to match the positioning of the aquifer(s).
- Slotted screens should be approved by South African National Standards and have the following dimensional specifications: U-PVC casing pipe, Class 10, drinking water standards, non-toxic and in standard lengths of three (3) meters, Depending on the aquifer, the Contractor may choose an appropriate slot width other than 0.75mm.

Casing Pipe and Sand Trap:

- Casing pipe should be approved by South African National Standards, and have the following dimensional specifications: **U-PVC Class 10**, drinking water standards, nontoxic and in standard lengths of three (3) meters in length, **Nominal diameter 125mm**, outer diameter 140mm, WT 7.5mm, for installation down to 90 meters, flush jointed for internal and external diameter, male/female trapezoidal threads and in lengths of 3 meters.
- The boreholes will be fully cased to bottom. The threads both male and female are properly cleaned with a clean brush and cloth before they are joined. If the pipes used are with bell and socket, these are cleaned using fluids and cemented with recommended solvent cement by the manufacturers of the casing pipes and screen. Wait for recommended time for the joint to set firmly before lowering into the borehole.
- The Contractor will take all necessary precautions during the transportation and storage of casing pipes from their warehouse to drilling sites to prevent distortions, ending or deformation of the pipe that could result in eccentricity along the length of the pipe.
- A maximum of 3 meter length of sand trap will be part of the well design when boreholes are cased to the bottom. The sand trap will be from UPVC casing pipe with specifications described above, fitted to the end of last screen and bottom end with an end-cap. The end cap is glued with appropriate solvent cement or solutions as recommended by the UPVC manufacturer. Note that the joint sections are properly cleaned with cleaning fluids and recommended time given for the joint to set firmly before lowering into the borehole.

Gravel Packing and Grouting:

- The annular space between the casing and borehole wall is filled with filter packing materials in the screen intervals and back filling materials. The gravel packing mixture to be used depends on the sieve analysis results and the slot size of the screen. The contractor will do the sieve analysis and then determine the gravel pack materials. Gravel packing material will be stored in a way so as to avoid contamination or rain washing finer materials. Iron and Calcareous grains will not be included in the gravel pack materials.
- Gravel packing is carried out as continuous feed operations done usually by two people filling uniformly around the circumference of the pipe. It is advisable to add some water with a pipe so that the gravel flows down. If the gravel gets inside the temporary casing, the casing is slowly pulled out and gentle well development is done to allow gravel to settle properly to a

height of 3 meters above the top of the screen interval or the targeted water bearing formation. More gravel is added with development if the gravel settles down.

- Backfilling and grouting is done when the *Minimum acceptable yield of 0.25liters/ second* is confirmed by development. The borehole cuttings or clayey soils are back filled up to 6 meters below the ground surface.
- The grouting is done with a concrete mix in the ratio of 1:2:3 of cement sand and gravel respectively. The gravel size should be not more than 6mm. Insert a 3meter Steel casing of 6 inches diameter on to the PVC casing, both protruding above ground level by at least 60cm to facilitate installation of electric pump

Borehole Development:

- On completion of drilling, the Contractor will choose a suitable and appropriate borehole development method.
- The borehole shall be developed for a period of at least three hours in order to obtain a maximum yield of water that is free of suspended matter.
- Developing shall be carried out by airlift pumping and surging, jetting and block surging, or other techniques the contractor feels is more appropriate and efficient to suit the casing, hydro-geological and drilling conditions prevailing in that borehole.
- All boreholes shall be presented for testing free of any bridging or obstruction to the total depth.
- The Contractor should provide the equipment required for verticality testing.
- Developing will be for a minimum period of 3 hours.

Pumping and recovery test

- A pumping test is required on a routine basis for borehole. The Contractor will estimate the discharge from the air lifting rates or blow test during borehole development. Based on the estimated discharge, the Contractor will certify the borehole as either "successful" or "lost".
- For successful borehole for electric pumps, the Contractor will undertake a seven hour pump testing of which the first one hour is a three step draw down test. The discharges for the step drawdown test will be fixed by the contractor based on the well development results.
- High yielding boreholes, with a discharge of more than 1 litre/second may be pump tested for 72 hours. The 72 hours pump test is conducted if the borehole is intended for an electric pump. After conducting the step drawdown tests the borehole should be allowed to recover almost to the original static water level (1 hour) before the constant yield test is undertaken continuously for 4 hours at the chosen/predetermined rate.
- The first step could be minimum acceptable discharge of 0.25 liters / sec. The second step will be at an estimated discharge from blow test (during the well development) and the third step will be 50 to 75% more than the estimated discharge from blow test. As a thumb rule the range of the three steps could be 0.5liter/Sec or above depending of development results, 0.75 liters /Sec and 0.25

liters/Sec. and each step for 20 minutes (total 1 Hours) the continuous test of 4 hours will be carried out at a discharge at which the dynamic water level will stabilize.

- *If the discharge is below 0.25 liters/second or dynamic water level is below 45 meters then the borehole will be regarded as "Lost".*
- Recovery test will be for one hour or such time when there is at least recovery of 80% of the static water level noted at the start of the pump test. The pump test data and the results of pump test are presented.
- The Contractor shall have on site a 900 V-notch weir, preceded by a tank with baffles, for the measurement of flows. Small flows (less than 0.25 liters/second) can be measured by timing the filling of a vessel of known volume. The Contractor shall also have on site an operating electric dip meter, calibrated in centimeters, and with visual/audible indicator of when the water level is reached.
- Readings of flow and water level shall be taken at the intervals defined on the test pumping form. For accurate measurement, an electrical/ sonic water level indicator with graduated tape for taking water level readings should be utilized. Recovery readings shall be taken for a minimum of 1 hour, during which period pumping equipment shall **not** be removed from the borehole.

3.3 Close Out Stage

1.4 The Bidder shall fill in a rate for each item where this is provided for. If the Bidder has bid a rate but omitted the amount, or vice versa, the missing amount or rate will, if possible, be determined in conjunction with the Bidder from the available data, and the Bidder must confirm his acceptance of these amounts and rates.

If the Bidder groups a number of items together and bids one lump sum for such group of items, this single bided lump sum shall apply to that group of items and not to each individual item, or, should he indicate against any item that full compensation for such item has been included in another item, the rate for the item included in another item shall be deemed nil.

The bid lump sums and rates shall be valid irrespective of any change in the quantities during execution of the Contract.

1.5 The services executed are being measured for payment in accordance with the methods described in the Contract Documents under the various payment items, notwithstanding any custom to the contrary.

Name of Bidder:

1.6 The short descriptions of the payment items in the Pricing Schedule are given to identify the items and to provide specific details. Reference shall inter alia be made to the Scope of Work for more detailed information regarding the extent of the work entailed under each item.

1.7 Subject to the conditions stated in paragraph 8 below, the rates and lump sums filled in by the Bidder in the Schedule of Quantities shall be final and binding with regard to submitting the bid, and may not be adjusted should there be any mistakes in the extensions thereof and in the total sums appearing in the bid. Should there be discrepancies between the Bid Sum and the correctly extended and totalled Pricing Schedule, the rates will be deemed correct, and the Employer will have the right to make such adjustments to the Bid Sum as he deems necessary to reconcile the total of the Pricing Schedule with the Bid Sum.

In such an event the Bidder will be consulted but, failing agreement between the parties, the decision of the Employer will be final and binding. Adjustment of the Bid Sum will take place only after acceptance of the bid, but prior to the signing of the Contract. In their own interests Bidders should make doubly sure of the correctness of their bid rates, the extensions and the Bid Sum.

1.8 A Bid may be rejected if the unit rates or lump sums for some of the items in the Pricing Schedule are in the opinion of the Employer, unreasonable or out of proportion and if the Bidder fails within a period of seven (7) days of having been notified in writing by the Employer to adjust the unit rates or lump sums for such items to make such adjustments.

1.9 Payment for services will be as follows:

- a) report After completion of the verification of information phase and submission and approval of
- b) Submission of a final design report and working drawings.
- c) Submission of the design report, bid, advertisement of the bid and adjudication of the bid.
- d) During construction phase payment will be according to the pricing schedule submitted.

CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids¹ invited.

- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.

- 3 Municipal Supply Regulation 38 (1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.

- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.

- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD 9) must be completed and submitted with the bid:

¹ Includes price quotations, advertised competitive bids, limited bids and proposals.

² Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
